

Medical Facilities

Success begins with a vision: to provide value to those we serve, to be an instrumental part of our communities, and to reward our workers for their successes and hard work. Our determination and desire, everyday, is to leave the world a better place than we find it. This desire drives the way we conduct our work, it drives our involvement in the communities within which we work, and it drives the way we treat those with whom we work. With technology, experience, and resolve; and with the core vision that drives them, we are constantly working to make your project a success.

Over the past decade, we have been fortunate to work on multiple Medical Projects varying from medical office buildings to out-patient clinics, radiology centers, and emergency rooms. Each represent a balance of energy efficient components, ease of maintenance, and economics of construction. Below are listed samples of the types of work we have accomplished.

- Emmet Hospital Generator
- Harris Court Med Office
- ID State School & Hospital II Bldg I
- Marcus Daly Memorial Hospital CT Installation
- Marcus Daly Memorial Hospital Master Plan
- Marcus Daly Memorial Hospital ER
- Marcus Daly Memorial Hospital Hospice/ Relocation
